Figure 1 consists of 15 histograms arranged in a single column, labeled (a) through (o). Each histogram shows the distribution of a specific parameter for 1000 simulated galaxies. The x-axis for histograms (a) through (d) is in solar units, while for (e) through (o) it is in log solar units. The y-axis for all histograms is 'Number of galaxies'.

- (a) Total mass: x-axis from 0 to 1000 solar units.
- (b) Stellar mass: x-axis from 0 to 1000 solar units.
- (c) Gas mass: x-axis from 0 to 1000 solar units.
- (d) Dark matter mass: x-axis from 0 to 1000 solar units.
- (e) Total mass (log): x-axis from 0 to 4 log solar units.
- (f) Stellar mass (log): x-axis from 0 to 4 log solar units.
- (g) Gas mass (log): x-axis from 0 to 4 log solar units.
- (h) Dark matter mass (log): x-axis from 0 to 4 log solar units.
- (i) Total mass (log): x-axis from 0 to 4 log solar units.
- (j) Stellar mass (log): x-axis from 0 to 4 log solar units.

Figure 1 displays the effect of the 1997-1998 El Niño on precipitation and streamflow across three regions: Amazon, Andes, and Pacific. The figure is organized into four rows of plots, each with three columns corresponding to the regions. The top row shows precipitation (mm) for the 1997-1998 El Niño, the second row shows streamflow (km³) for the 1997-1998 El Niño, the third row shows the difference in precipitation (mm) between the 1997-1998 El Niño and the 1992-1993 El Niño, and the bottom row shows the difference in streamflow (km³) between the 1997-1998 El Niño and the 1992-1993 El Niño. The x-axis for all plots is 'Month' from January to December. The y-axis for the top two rows is 'Precipitation (mm)' and 'Streamflow (km³)' respectively. The y-axis for the bottom two rows is 'Difference (mm)' and 'Difference (km³)' respectively. The plots show a significant increase in precipitation and streamflow during the 1997-1998 El Niño compared to the 1992-1993 El Niño, particularly in the Amazon and Andes regions.
